Minimum Through-Hole Solder Joint Requirements • Class 2

Association Connecting Electronics Industries

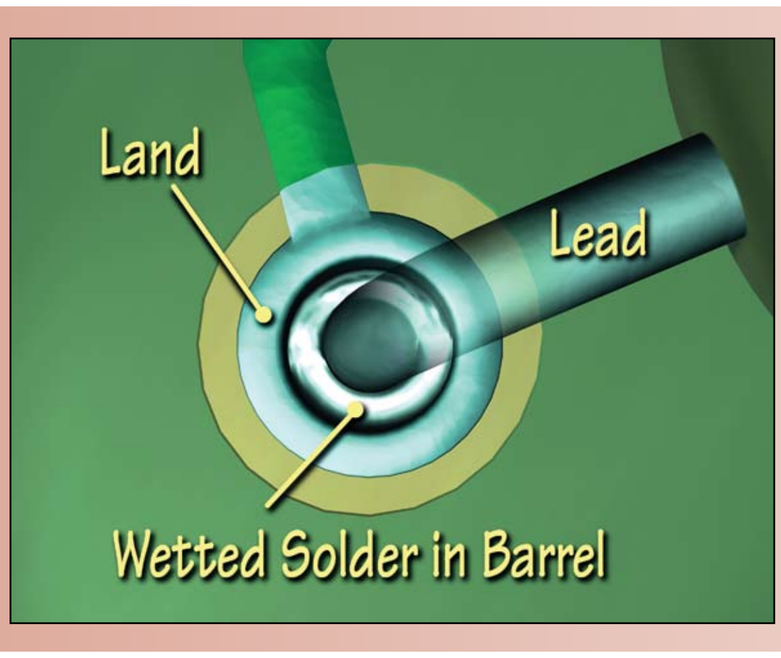
IPC®

Shown below are the *minimum* acceptable conditions for a Class 2 Plated-Through Hole Solder Joint. All of the illustrations show the same solder connection from three different views: top, barrel (cutaway), and bottom.

Any Class 2 solder connection failing to meet these minimum requirements should be considered unacceptable.

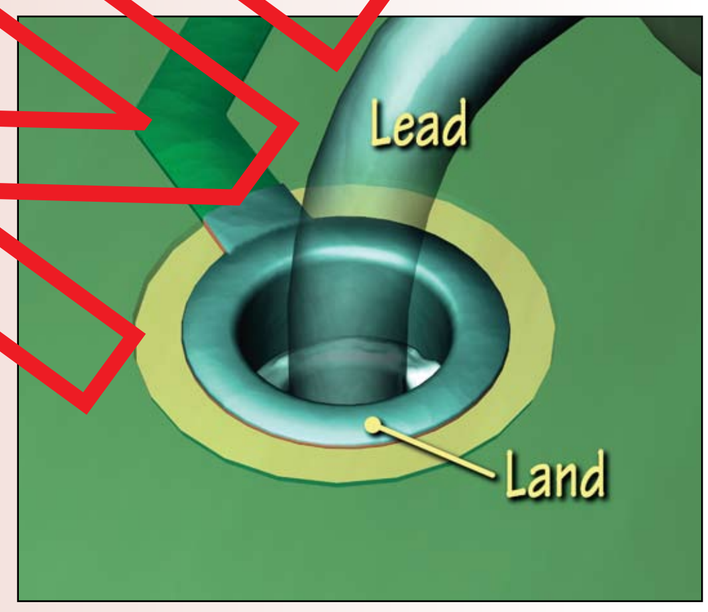
*References: IPC-A-610**F** and IPC J-STD-001**E***

COMPONENT SIDE (PRIMARY, TOP) SOLDER DESTINATION

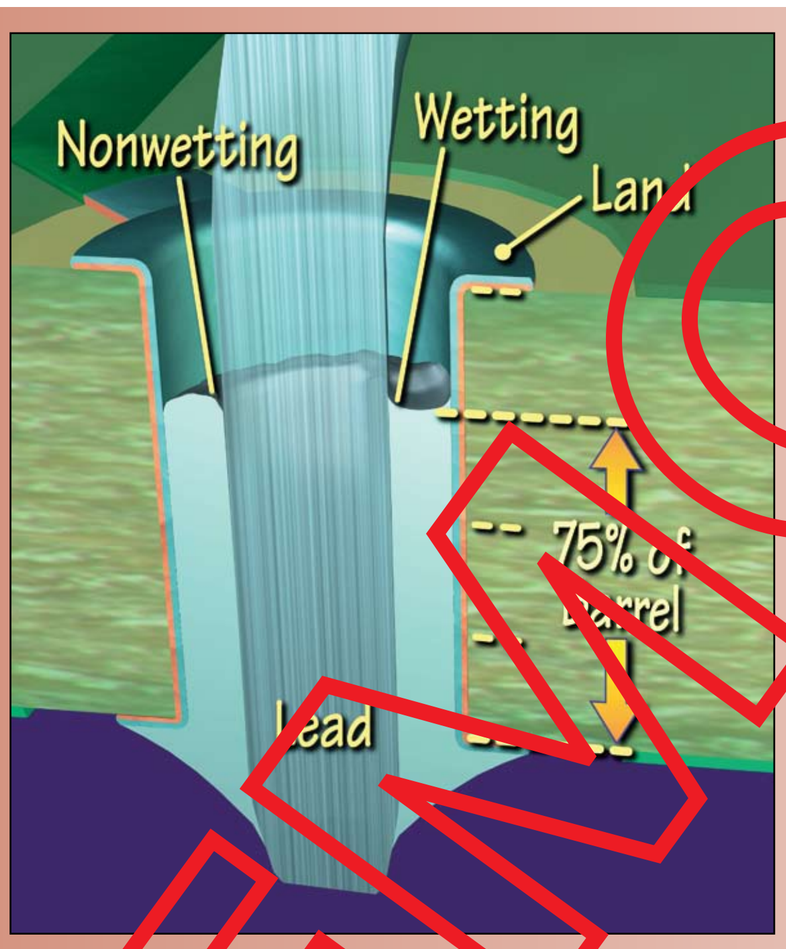


Wetting of component side land = 0%

A properly wetted solder joint on the top or component side land is not required.



CUTAWAY VIEW (BARREL)



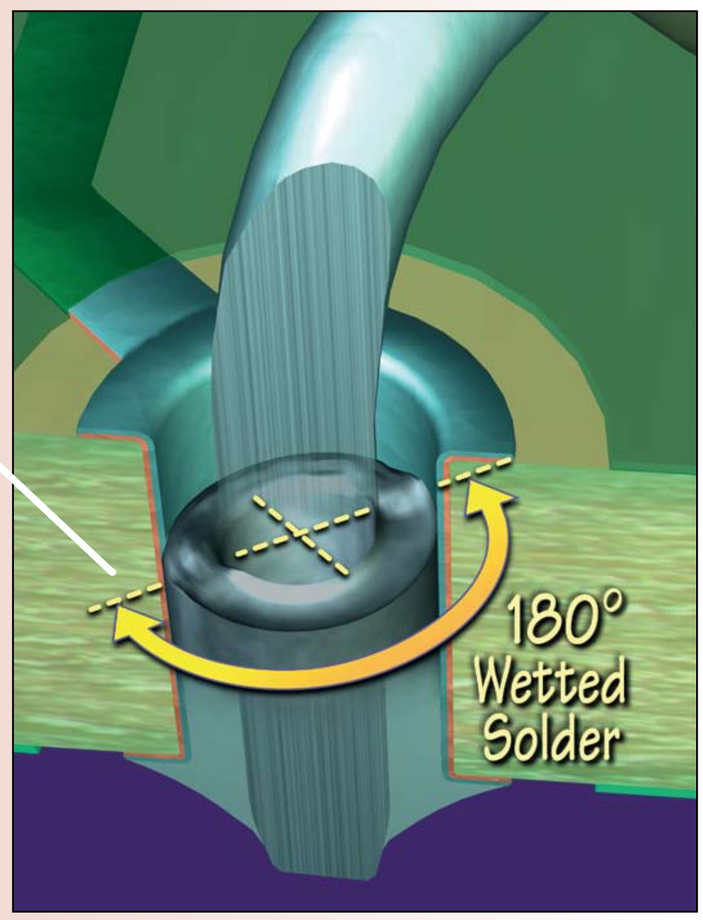
Vertical fill of barrel = 75%

Solder must fill at least 75%, or 3/4 the height of the hole.

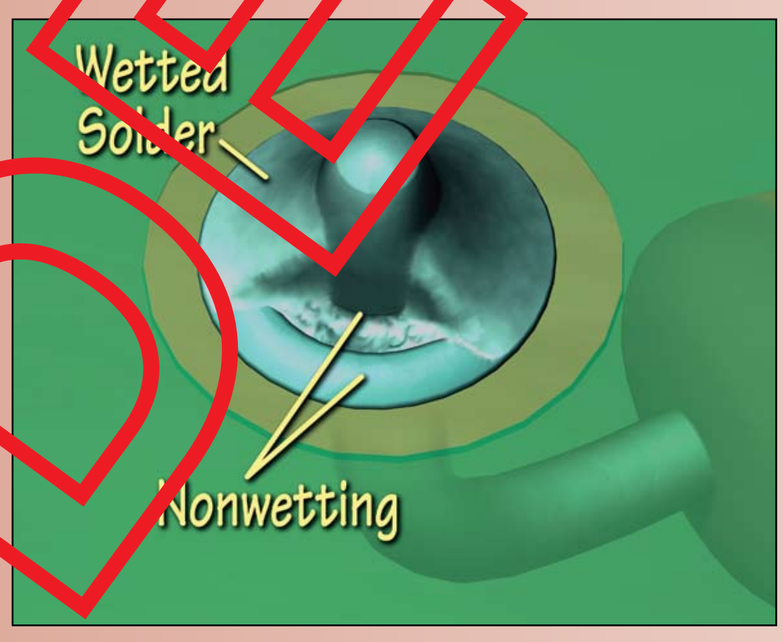
Wetting of component side lead & barrel = 180°

A properly wetted solder fillet must circle *at least 180° (or 1/2) of the way around the lead and barrel.*

The remaining 180° of the solder connection may exhibit non-wetting, but it must *fill* the hole to the same height (75%) as the properly wetted solder.



SOLDER SIDE (SECONDARY, BOTTOM) SOLDER SOURCE



Wetting of solder side lead, land & barrel = 270°

A properly wetted fillet must extend *at least 270° (or 3/4) of the way around the lead, land and barrel on the* bottom or solder side of the board.
